How to Install EIOBoard on Windows Server 2012

Setup .NET and IIS

- 1. Install .NET.
- 2. Open up the Server Manager (go to: Start > All Programs > Administrative Tools > Server Manager).
- 3. Open up the Add Features Wizard (go to: Action > Add Features).
- 4. Checkmark ".NET Framework 3.5" under ".NET Framework 3.5 Features". Also Checkmark "ASP.NET 4.5" under ".NET Framework 4.5 Features". Here is the window:

b	Add Roles and Features Wizard	_ _ ×
Select features		DESTINATION SERVER EBWIN2012
Before You Begin Installation Type Server Selection	Select one or more features to install on the selected server. Features	Description ASP.NET 4.5 provides core support
Server Roles Features	INET Framework 3.5 Features (Installed) INET Framework 3.5 Includes .NET 2.0 and 3.0) Etc encoded	for running ASP.NET 4.5 stand-alone applications as well as applications that are integrated with IIS.
Confirmation	Non-HTTP Activation	
Results		
	Background Intelligent Transfer Service (BITS) BitLocker Drive Encryption BitLocker Network Unlock BranchCache Client for NFS Data Center Bridging	
	< Previous Next	> Install Cancel

5. If you do not install .NET, this error will come up when you attempt to install:

6. Install IIS.

7. If you do not install IIS, the installer will throw this error message:

How to Install EIOBoard on Windows Server 2012

Internet Information Services (IIS) not installed		
IIS version 5.00 or later must be installed in order to continue, Please visit the following link for installation instructions:.		
Microsoft.com		
ОК		

8. In the Server Manager, open up the Add Features Wizard again (go to: Action > Add Features).

- 9. Checkmark the following:
- "Web Server (IIS)"
- "IIS 6 Metabase Compatibility" under "Security"
- "ASP.NET 3.5" under "Development" (add additional requirements as necessary)

Install SQL and EIOBoard

- Install SQL Server Express manually (<u>http://www.microsoft.com/en-us/download/details.aspx?</u> <u>id=29062</u>). Name the instance "EIOBoard". Choose Mixed Mode for the security and be sure to note the password as you'll need it later for the EIOBoard Installer. Accept all other defaults or customize as necessary.
- 2. Now open up SQL Server Configuration Manager (go to: Start > All Programs > Microsoft SQL Server 2008 R2 > Configuration Tools > SQL Server Configuration Manager).
- On the left side in the explorer tree view, go to: SQL Server Network Configuration > Protocols for MSSQLSERVER.
- 4. Enable TCP/IP and Named Pipes.
- 5. Restart SQL to make the changes take effect.
- Now start the EIOBoard Intranet Installer. Go through and configure it appropriately, but be sure to use localhost/EIOBoard.
- 7. Finally, go into IIS and create a new "EIOBoard" app pool and assign it .NET 2.0.
- 8. Once that is done, manually go set EIOBoard and the WebService virtual directory to use the EIOBoard App Pool in the basic settings.
